

Ahmed Tarek Radwan

Backend Software Engineer — Node.js / Express

Egypt • +20 111 424 6786 • ahmed.tarek.radwan23@gmail.com • github.com/ahmedradwan21 • linkedin.com/in/ahmed-tarek-radwan

PROFESSIONAL SUMMARY

Backend Software Engineer with production experience building RESTful APIs and real-time systems (Socket.IO) using Node.js/Express, with additional hands-on experience in Python/Django. Comfortable owning a feature end-to-end — from data modeling to API design, authentication, and deployment. Currently deepening expertise in TypeScript and NestJS to bring services closer to production-grade, scalable architecture. Looking to join a backend team building products that reach real users.

TECHNICAL SKILLS

- **Languages:** JavaScript, Python, TypeScript (in progress)
- **Backend:** Node.js, Express.js, NestJS (in progress) · Django, Django REST Framework
- **Databases:** PostgreSQL, MongoDB, MySQL, SQLite
- **Real-time:** Socket.IO (real-time chat & notification systems)
- **Auth & Security:** JWT Authentication, Role-Based Access Control (RBAC)
- **DevOps & Tooling:** Docker, CI/CD fundamentals (GitHub Actions), Git/GitHub, Postman, Swagger / OpenAPI
- **Backend Concepts:** RESTful API Design, Middleware Design, Notification System Design, OOP
- **Practices:** Agile / Scrum, Code Reviews, API Documentation

EDUCATION

Bachelor of Information Technology — Faculty of Computers & Information 2020 – 2024

Egyptian E-Learning University (EELU)

- Relevant Coursework: Database Systems, Software Engineering, Computer Networks, Data Structures & Algorithms, Object-Oriented Programming
- Graduation Project: Blood Donation Locator Application (Distinction) — Full-stack platform with AI-powered OCR and real-time APIs
- Focused academic track on backend architecture, API design, and database management

PROFESSIONAL EXPERIENCE

Freelance Backend Developer Mar 2026 – Present

Self-employed — Remote

- Delivering backend REST APIs for freelance clients using Node.js/Express, covering database design, authentication, and API documentation.
- Collaborating directly with clients to gather requirements, define scope, and deliver features on deadline.

Military Service Feb 2025 – Mar 2026

Egyptian Armed Forces — Egypt

- Administrative role handling time-sensitive documentation and task execution within a structured, high-pressure environment.
- Built discipline and reliability in managing critical responsibilities under strict deadlines and protocols.

Backend Developer — Part-time Aug 2024 – Jan 2025

Actus Go — Remote — Jordan

- Built and maintained Node.js/Express REST APIs powering the gamification engine of a pre-launch shopping platform — serving challenges, rewards, and coupon discovery for mobile and web users.
- Partnered with the front-end team to define API contracts and data structures, keeping integration smooth across web and mobile clients.

Software Engineer - full-time May 2024 – Oct 2024

Dragons Bootcamp LLC — Remote — United States

- Built core backend features for an internal Node.js/Express LMS platform used by students and instructors, including task management and lecture content delivery.
- Designed and implemented a real-time chat and notification system using Socket.IO, with per-user preference controls and persistent storage.

- Built a real-time lecture progress tracking system, updating each learner's course progress live as they moved through content.
- Implemented authentication and role-based access control, and integrated third-party services through REST APIs.
- Contributed to sprint planning, Swagger API documentation, and peer code reviews.

Back-End Developer — Internship Feb 2024 – Apr 2024

Dragons Bootcamp LLC — Remote — United States

- Developed Django REST Framework endpoints under senior engineer mentorship.
- Participated in code reviews and contributed to the test suite for assigned modules.

Trainee Aug 2023 – Jan 2024

Dragons Bootcamp LLC — Remote — United States

- Completed structured backend training covering Python, Django, SQL, and Git.
- Delivered a fully functional e-commerce REST API as the program's capstone project.

PROJECTS

Blood Donation Locator — Graduation Project (Distinction) — Team Lead github.com/ahmedradwan21/Blood-Donation-Locator

Django · Flask · Flutter · OpenCV · Pytesseract

- Led the graduation project team, dividing work across the mobile, AI/OCR, and backend workstreams and coordinating integration between them.
- Owned the backend/API layer of the platform: built the Blood Donation matching API (Django) and the OCR processing API (Flask + OpenCV + Pytesseract) that connects the Flutter mobile app to CBC report analysis and patient-status evaluation, plus a chatbot API — packaged in a Flutter mobile app with a released APK.

OCR API — Medical CBC Report Reader github.com/ahmedradwan21/OCR_API

Django REST · OpenCV · Pytesseract · Docker

- Deployed a REST API that extracts WBC, RBC, Platelet Count, and Hemoglobin values from uploaded CBC report images using OCR and computer vision, then returns a patient status assessment.

Blog Management System — Team Lead github.com/ahmedradwan21/Blog_App

Django · Django REST Framework · Bootstrap

- Led a team of developers, distributing tasks and coordinating work to build a multi-user blogging platform with drafting, publishing, commenting, tagging, and category management.
- Designed a company/writer workflow with join requests and approve/reject access control, and built the full REST API covering blogs, companies, categories, and tags.

Green World ATR github.com/ahmedradwan21/Green_World_ATR

Django · Python · TensorFlow · HTML · CSS

- Architected a full-stack web application with an AI-powered plant classification module that identifies plant species from uploaded images with 85%+ accuracy.
- Integrated a TensorFlow-based ML model into the Django backend, designing the API endpoint (POST /api/classify) to handle image preprocessing, model inference, and result serialization.
- Built a responsive frontend using HTML, CSS, and JavaScript for image upload, progress indicators, and dynamic result display.
- System Design: owned the complete data flow from client upload → server validation → ML inference → JSON response, ensuring low latency and error handling for unsupported image formats.

Covid Management System github.com/ahmedradwan21/Covid_Management

Django · Python · HTML · CSS · Bootstrap · AI Image Analysis

- Developed a full-stack web dashboard for tracking and managing COVID-19 patient records, with role-based access control and reporting features.
- Integrated an AI-based image analysis model into the platform to assist in patient status evaluation, handling the inference pipeline and result rendering in the web interface.
- Implemented OTP-based email verification for secure user registration and login.

Additional Projects

- **ATR Social** — Social media app with feed, follow/unfollow, likes/comments, and a connection-suggestion system. (Django, JavaScript, Bootstrap) — github.com/ahmedradwan21/ATR_Social

ADDITIONAL INFORMATION

- **Soft Skills:** Problem-solving, team collaboration, time management, fast learner, clear communication

- **Languages:** Arabic (Native), English (Intermediate — comfortable in remote team environments)
